A Major Malfunction.The Story Behind the Space Shuttle Two days in a row of these sucks. And there's one more anniversary on Saturday. On January 28, 1986 the Space Shuttle Challenger broke up 73 seconds into

On this day in 1986, the sight of shuttle Challenger exploding in the skies above Cape Canaveral painted an indelible mark on the public psyche and still carries the power to haunt. Over the minutes, hours, days, weeks, months and years to come, the loss of the shuttle and her seven-member crew—Commander Dick Scobee, Pilot Mike Smith, Mission Specialists Ellison Onizuka, Judy Resnik and Ron McNair and Payload Specialists Greg Jarvis and Christa McAuliffe—would be played out again and again via television and later the internet. “Obviously a major malfunction,” was all Steve Nesbitt, the stunned launch commentator, could remark. Now subjected to aerodynamic loads for which she had not been designed, Challenger had disintegrated into several large fragments. 73 seconds after launching the space shuttle Challenger explodes. All seven of its crew are lost. Over the tannoy a distraught audience hears the words, “obviously a major malfunction.” After the horror come the questions. The Rogers Commission is formed to investigate the disaster. Amongst its members are astronaut Sally Ride, Air Force General Donald Kutyna, Neil Armstrong, the first man on the moon, and Professor Richard Feynman; legendary quantum physicist, bongo enthusiast and educator. The components of the space shuttle system (From [https://www.nasa.gov/returntoflight/system/system\\_STS](https://www.nasa.gov/returntoflight/system/system_STS). Shortly after her last launch—on the morning of January 28, 1986—space shuttle Challenger experienced a "major malfunction." The effect of this malfunction caused the shuttle to explode, leading to the deaths of all seven astronauts. This graphic, using NASA's data and information, explains what happened after the o-ring in the right solid rocket booster failed. Officials, including the medical examiner, were never able to conclude whether the astronauts died in the explosion or after their orbiter crashed into the Atlantic Ocean (traveling at about 200 mph). Challenger's anniversary comes in a week that includes other tragic anniversaries, including the Apollo 1 pad fire that claimed three astronauts' lives (Jan. 27, 1967) and Columbia shuttle breakup that killed seven (Feb. 1, 2003). Other astronauts have died in training accidents; you can see a list at the Astronaut Memorial Foundation. Additionally, four cosmonauts died in spaceflight: Vladimir Komarov (Soyuz 1 on April 24, 1967) and Georgi Dobrovolskiy, Viktor Patsayev, and Vladislav Volkov (Soyuz 11 on June 30, 1971). The Challenger space shuttle a few moments after the rupture took place in
