The only atlas of anatomy that combines illustrations of gross anatomy with radiographic images, ultrasound and endoscopic views to give a complete appreciation of all the structures. Preparations of cross-sectional anatomy aid interpretation of diagnostic imaging such as ultrasonography. All photographs are of fresh material, or living animals, rather than preserved specimens, to demonstrate the appearance of tissues in the living animal, or at post mortem autopsy. Includes annotated images to illustrate the position and orientation of structures in situ, in the living animal, as they will be
