Respiratory assessment in the recovery unit: Essential skills for the perioperative practitioner. Article. Nov 2007. T. Day. Physical assessment, once considered an example of a medical skill, is steadily moving into advanced nursing practice. Recent government policies have accelerated the rate of role change in healthcare and these policy changes have had a strong impact across all practice arenas, but notably more so in the critical care setting.Â Oxford Handbook of Clinical Medicine 3rd edn Philadelphia Lane G 1990 Pulmonary clinical assessment Textbook of Critical Care Nursing: Diagnosis and Management. Jan 1994. 283-287. O Epstein. G Perkin. D Bono. London Cookson J Mosby-Wolfe.

Clinical assessment of media use, motivation, social comparison, and body image is an underdeveloped area of psychometrics. Females with a negative body image are particularly vulnerable to media images of the objectified slender ideal, and they are also likely to actively seek out ideal body media, including pro-ana or pro-bulimia websites, for social comparison and for motivation to "be good" and "stay in control." Observation of changes in respiratory status (coughing, choking, increased secretions, increased adventitious sounds on auscultation) is also important. In addition, assessment includes an evaluation with various food thicknesses and textures, depending on the age of the child. An admission assessment should be completed by the nurse with a parent or care giver, ideally upon arrival to the ward or preadmission, but must be completed within 24 hours of admission. Admission assessment is in the admissions tab of the ADT navigator with additional information being entered into the patient's progress notes. Privacy of the patient needs to be considered all times. Clinical judgment should be used to decide on the extent of assessment required. Assessment information includes, but is not limited to: Primary assessment (Airway, Breathing, Circulation and Disability) and Focused systems assessment. Respiratory assessment in critically ill patients: airway and breathing. *British Journal of Nursing*, 18(8), 456. Hockenberry, M. J., & Wilson, D. (2009).
