Examples from the anaesthetic and intensive care literature are used liberally to demonstrate the common statistical tests. References are provided, again often in clinical literature, for less widely used techniques. For the more advanced reader there is a chapter dedicated to statistical errors in anaesthesia. This will prove invaluable for those wishing to analyse published research critically and should be compulsory reading for any clinician planning a study without professional statistical assistance. For this same clinician there is also a chapter on how to design a clinical trial, with... Article Outline. Source. Statistical Methods for Anaesthesia and Intensive Care.
