Explore research methods, the contexts in which they are used, and the benefits, drawbacks and ethical implications involved, as you learn how researchers try to find out about people, societies, and cultures. This course will explore the techniques and approaches used by researchers to answer difficult questions about the social world. In this course, we're going to explore: The kinds of methods researchers tend to adopt. The contexts in which certain research methods are used. The benefits, drawbacks and ethical implications of research. This course isn't a practical or technical guide to doing research. Rather, it offers a way for us to think deeply about what methods are, and what they allow us to achieve.

The Knowledge Base An online hypertext textbook on applied social research methods that covers everything you want to know about defining a research question, sampling, measurement, research design and data analysis.

Selecting Statistics An online statistical advisor! Answer the questions and it will lead you to an appropriate statistical test for your data.

The Simulation Book A previously unpublished book of manual (i.e., dice-rolling) and computer simulation exercises of common research designs, for students and researchers to learn how to do simple simulations.

Concept Mapping A resource for social psychologists are interested in the ways that other people affect thought, emotion, and behavior. To explore these concepts requires special research methods. Following a brief overview of traditional research designs, this module introduces how complex experimental designs, field experiments, naturalistic observation, experience sampling techniques, survey research, subtle and nonconscious techniques such as priming, and archival research and the use of big data may each be adapted to address social psychological questions. This module also discusses the importance of obtaining a representative sample.

They use research methods to design a study—perhaps a detailed, systematic, scientific method for conducting research and obtaining data, or perhaps an ethnographic study utilizing an interpretive framework. Planning the research design is a key step in any sociological study. When entering a particular social environment, a researcher must be careful. There are times to remain anonymous and times to be overt. There are times to conduct interviews and times to simply observe. Social Research is a method used by social scientists and researchers to learn about people and societies so that they can design products/services that cater to various needs of the people. Different socio-economic groups belonging to different parts of a county think differently. Various aspects of human behavior need to be addressed to understand their thoughts and feedback about the social world, which can be done using Social Research. Any topic can trigger social research — new feature, new market trend or an upgrade in old technology. Social Research is conducted by following a systemat
