The Quantum Brain: The Search for Freedom and the Next Generation of Man: Jeffrey Satinover: 9780471441533: Books - Amazon.ca.

Dr. Jeffrey Satinover, the scientist from the movie *What the Bleep Do We Know!?* and author of five books including *The Quantum Brain: The Search for Freedom and the Next Generation of Man*, met with foremost Kabbalist, teacher and founder of Kabbalah International, Michael Laitman, PhD to discuss science, spirituality, and the boundary between them. Dr. Satinover, who represents the perspective of quantum physics, opened the discussion by disagreeing with the link made between quantum theory and spirituality in *What the Bleep Do We Know!?* Where we humans have freed ourselves from so many boundaries throughout our history, we now seek to free ourselves from a boundary that is inside us - the boundary of our own perception. His former areas of physics research were in fundamental quantum theory and in its application to quantum information processing and computation. Presently he is investigating certain aspects of game theory in complex systems. Satinover is Jewish, but says he has an eclectic worldview.^{[12][13]} *The Quantum Brain: The Search for Freedom and the Next Generation of Man* (Wiley, 2002). References^[edit]. ^ a b New York Times: "Psychotherapist Weds Julie Leff," June 11, 1982, accessed March 15, 2012. The only freedom he is sure exists is the "freedom" of quantum systems. In Satinover's view atoms are definitely "free," but it remains to be seen whether we are. (His understanding of freedom is evidently not the traditional one, according to which only rational beings can be free.) But even leaving aside this all-important issue, the brain builders of the twenty-first century must still face another huge question: What kind of machine is the human brain? For decades the prevailing view in cognitive science and artificial intelligence was that our brains work somewhat in the manner of the conventional Turing type of computer, which uses programs. Satinover, however, rejects this "top-down" model of the brain in favor of a "bottom-up" model based on "neural networks."
