Like the other management concepts, lean supply chain management also has the disadvantage side too. When companies become leaner with fewer suppliers, companies might face the problem of a disrupted chain, if their suppliers meet with severe risks. For instance, there was a fire at the Philips semiconductor plant in New Mexico in March 2000. At that time, Ericsson – one of Philips’s™ customers – did not have a contingency plan of additional suppliers. Ericsson chose to wait its suppliers, Philips, and thus Ericsson faced with a long delay in production line and had huge losses in phone business. 1-16 of 57 results for "lean supply chain and logistics management".
