In 1965 I first taught an undergraduate course in abstract algebra. It was fun to teach because the material was interesting and the class was outstanding. Five of those students later earned a Ph.D. in mathematics. Since then I have taught the course about a dozen times from various texts. Over the years I developed a set of lecture notes and in 1985 I had them typed so they could be used as a text. They now appear (in modified form) as the first few chapters of this book. Here were some of my motives at the time. A course for the undergraduate students on specialization Mathematics and Economics. Lecturer: Alexei Akhmetshin Class teacher: Maria Derkach. Course description. Abstract Mathematics is a two-semester course for the third year students studying at ICEF specializing in Mathematics and Economics. It is based on the Introduction to Abstract Mathematics course of the University of London (UoL) with further expansions into selected topics from algebra, real analysis and topology. The emphasis of the course is on the theory rather than on the method. Additional reading: 1. Vinberg E.B., A Course in Algebra. (Factorial Press, 2001). 2.
