I thought it would be cool to combine light, and all what it represents, with a book, which is also very symbolic by itself. It is the top book if you want to test the waters before fully committing to lighting design as a disciple. It is definitely worth the investment because it will give you a satisfactory outline of the subject. Mark Karlen the author of the book along with Christina Spangler and James R. Beyna mix an academic approach with practical experience, this book is a perfect balance. No jargon or terminology, just lighting design in clear, simple language. It features many useful diagrams and examines several lighting projects.
