The Science of Laboratory Diagnosis - Google Books Result These limitations are considerably overcome by new assays for Cortisol and corticosterone based on the principle of competitive protein-binding of the steroids .

Most of the commonly-performed competitive protein-binding radioassay methods utilized in the clinical laboratory are based on the principle of saturation analysis. Although many different methods for linearization of saturation-type assays have been proposed, the algebraic equivalency of all of these methods has not been adequately documented. In this manuscript we have shown the physical and mathematical basis for various methods for linearization of saturation type assays and the algebraic equivalency of these linearization methods. We have also shown that key parameters such as slope and
